

Cal OES Daily Situation Report

June 9, 2018

Landscape restoration helps prevent severe, catastrophic wildfire by creating a terrain where more low intensity beneficial fire can occur.

SITUATION SUMMARY

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (vND) in Chickens, Los Angeles and San Bernardino Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (vND) in chickens in Los Angeles and San Bernardino Counties.

- CDFA and the U.S. Department of Agriculture (USDA) have scaled up their response to this incident, as more cases have been detected.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus.
- 1 AmeriCorps San Diego Spanish language interpreter responded to conduct surveillance (education/outreach), with a two week rotation.
- The USDA National Incident Management Team (IMT) arrived on 06/01/18 and teamed up with CDFA personnel at the CDFA Ontario District Office.
- As new areas require surveillance, parishes in these areas will be contacted. The Cal OES AREP has scheduled vND Spanish speaking veterinarian presentations at [three \(3\)](#) Catholic Parishes on 06/09/18 (one mass) and 06/10/18 ([four masses](#)). As presentations are scheduled the Cal OES AREP will provide a parish bulletin announcement, mass announcement for the priest, talking points, and all the materials that will be distributed following the masses.
- The Cal OES Agency Representative (AREP) is facilitating a contact with San Bernardino County Solid Waste Management Public Works (SWMPW) via San Bernardino County OES to determine the possibility of using sites for disposal of backyard dead birds.
 - SWMPW has prepared a draft Board agenda item pending receipt of the USDAs Agreement. USDA has located a contracting officer to begin drafting the agreement with SWMPW.
 - Landfill work group is seeking alternate sources for the disposal of dead birds. [The Cal OES AREP continues to assist with gathering information on Covanta Energy, composting at fairgrounds, while others researched the National Veterinarian Stockpile. The Cal OES AREP contacted fairgrounds in San Bernardino County regarding a project to compost bird carcasses; environmentally acceptable method of disposal of normal poultry flock mortality.](#)

Activations

- San Bernardino Operational Area (OA) Emergency Operations Center (EOC) is activated to Level 3 (lowest level) and will continue to monitor the incident.

Deployments

- 1 Cal OES Southern Region Senior Emergency Services Coordinator (Sr. ESC) deployed to the CDFA/USDA ICP as an AREP with an operational period of 0700-1900 hours.

Logistics

Per the Cal OES Southern Region AREP on [06/09/18 at 0820 hours](#):

- USDA is inquiring with private real estate companies since they have the ability to lease directly as well as the DGS via CDFA.
- Logistics has located a facility in Rancho Cucamonga. [USDA/CDFA are currently in negotiations. The office/warehouse space adjacent to the CDFA District Office has been placed on hold by USDA. The ICP is now looking for a nearby hotel conference room. The ICP requested that the Cal OES AREP continue to pursue space at the Ontario International Airport as part of a contingency plan. An appointment with the Ontario International Airport Authority for 06/11/18 for a discussion between Logistics and the OIAA.](#)

WEATHER OF CONCERN

Weather of Concern

- Critical red flag warning conditions will occur in the Santa Ynez Range and into the foothills above Montecito and Santa Barbara from late Saturday afternoon into early Monday morning.
 - Gusty Sundowner winds up to 60 mph or higher will be likely Saturday night into Sunday with slightly lower gusts up to 50 mph Sunday night.
 - Humidity will drop into the 15 to 30 percent range, but winds will push any fire start rapidly southward from the foothills and mountains.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Strong Gusty SW-NW Wind Today ***

A vigorous Pacific trough is passing over the region today with mostly cloudy skies and isolated to scattered light showers in the north and partly cloudy skies in the south. Isolated thunderstorms are also possible in the north today. Light rain fell across the mountains north of a line from Susanville to Santa Rosa, with more than half an inch in far NW CA. Humidity has climbed throughout the entire region, and the minimum afternoon readings in the driest inland areas are expected to remain above 20%. Temperatures will be 10-15 degrees below normal. Strong gusty SW-NW winds will continue across the region today. Peak gusts from the Sierra crest east from Plumas County south could reach 35-45 mph this afternoon. Elsewhere gusts throughout the day will be 25-35 mph. Clouds will diminish from west to east this afternoon.

Sunday will partly cloudy, but no rain is expected. Temperatures will still be a few degrees below normal, and relative humidity (RH) will drop into the middle teens in the driest inland valleys. NW-NE winds will gust to 25 mph in the morning, but turn back to SW-NW with gusts of 20-30 mph in the typical areas in the afternoon. The final portion of the trough will move out of the region late Sunday as a high pressure ridge pushes in.

The ridge will produce a drying and warming trend through Tuesday, with the warmest inland areas reaching 95-100 on Tuesday. Minimum inland RH will be 12-20% both days. Another Pacific low pressure trough will produce cooler and more humid weather Wednesday through the end of the week, with a chance of mountain showers next Friday.

SOUTHERN CALIFORNIA

Strong westerly winds across the desert passes through tonight

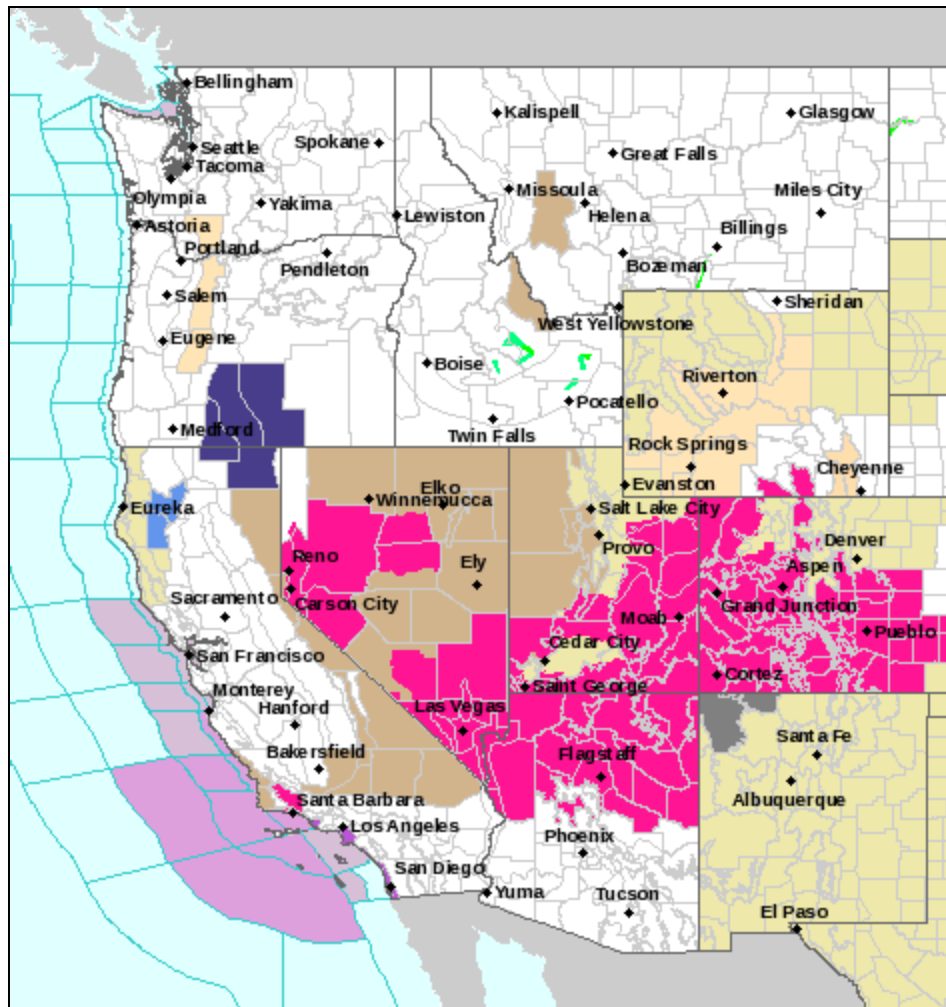

Strong northerly winds across Santa Barbara County and the Grapevine tonight and Sunday night

A trough moving inland over the Pacific Northwest and Northern California will bring westerly winds of 20 to 40 mph with gusts to 60 mph across the desert passes through tonight. There will also be northerly winds of 20 to 30 mph with gusts to 50 mph across much of Santa Barbara County and the Grapevine Area both tonight and Sunday night as the back side of the trough moves through. Temperatures will be near normal this weekend, with mid 60s to mid 70s across the mountains and upper 70s and 80s in the valleys. Minimum humidity will be mainly between 15% and 30% away from the coastal areas this weekend, but there will be widespread single digit humidity across the deserts. A ridge of high pressure will build into the region from the southeast causing temperatures to rise to 5 to 10 degrees above normal and minimum humidity to drop mainly into the teens Monday through Wednesday. There will be westerly afternoon and evening winds of 15 to 25 mph with gusts to 40 mph across the desert passes early next week. A weak trough will drop down the West Coast bringing near normal temperatures and a little increase in humidity late next week. This trough will also cause the westerly afternoon and evening winds across the desert passes to increase to 20 to 30 mph with gusts to 50 mph Wednesday through the end of next week.
